

Base Coaters

Basecoaters guarantee a better finished coated can while misting is reduced to a minimum. Our machines are supplied from speeds starting at 600 cans per minute and up to speed of 2000.

The Coaters are, alike the Decorators, easy to change to other cansizes and provide good access to components for maintenance work.

Our Basecoaters are easy to operate and allow for flexible change of basecoat weights,

Canwraps can be adjusted during production to produce the best coated cans without coating weight variations.
