

### Pride Punch Grinder 40A

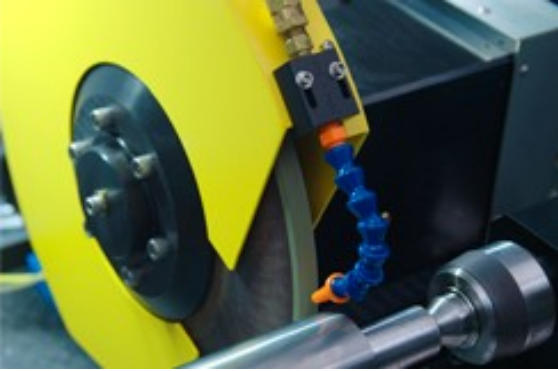

# TIME IS MONEY.

## THIS MACHINE GIVES YOU MORE OF BOTH.

The Pride CNC Punch Grinder 40A is specifically designed to meet the rigorous demands and exacting requirements of punches used in two-piece can body making. Because there is no compromise involved when trying to regrind punches and dies on the same machine, this dedicated package, combined with Pride's extensive punch grinding experience, make it the ideal choice for can making plants located in areas where punch regrinding services are not readily available — helping you reduce downtime, improve throughput and respond quickly to changing demands.

## LARGER GRINDING WHEEL MEANS FEWER WHEEL DRESSINGS.

The 355mm diameter grinding wheel has the abrasive characteristics to produce the critical surface finishes you need. The increased surface area reduces the need for frequent wheel dressings, providing super-long life and consistency at any grinding pressure to keep on working—long after smaller grinding wheels have dulled.

**The 355mm diameter grinding reduces the need for wheel dressings.**

## LEANER, MEANER AND EASIER TO USE.

The new operator interface requires no programming and provides a simple efficient way to input dimensions from the punch print and perform the machining cycle. The compact design and small footprint save up to 40% more space making it the ideal fit for most crowded can plant environments.
